Cycode **Maestro**

Meet the Security Conductor of Your Agentic SDLC

Reduce the risk of my critical app

Bring AI agents, code-to-runtime context,
and orchestration together and turn software
complexity into security harmony.

Do More than Humanly Possible with Agentic Application Security

It is impossible to secure software and stay ahead of threats in the AI era using manual tools and antiquated processes. Cycode Maestro is the first AI security conductor that orchestrates complex, multi-agent workflows to secure your entire AI-native software factory.

"Cycode was like a breath of fresh air. Suddenly, we had all this information and capabilities we'd only dreamed about, or hadn't even imagined. Cycode enables our engineers to handle findings more efficiently and get things done, rather than just creating a bunch of noise."

Chris Peterson,
Chief Information Security Officer at Unity

Experience Agentic Application Security

Tap into an expanding orchestra of AI agents working in harmony

Get your weekend back

Without Cycode Maestro

8 AM	Critical CVE alert
10 AM	Manually cross-referencing CSV exports from three different scanners. Panic about coverage gaps.
12 PM	Try to figure out which instances are reachable and exploitable
2 PM	
4 PM	Try to identify code owners
6 PM	Cancel weekend plans

With Cycode Maestro

8 AM	Critical CVE alert
10 AM	Ask Maestro to assess exposure, analyze exploitability, and remediate
12 PM	Brief exec team on exposure & response
2 PM	Security Champions meet-up
4 PM	Focus on security strategy and high-value tasks
6 PM	❤ Date night
